## **OMEGA EASY FIX**

An innovative fixing system for stone cladding

- Only four standard elements
- For any slab thickness
- With a revolutionary installation procedure
- Exceptionally adaptable to different slab loads
- Adjustable to varying slab thicknesses

The **OMEGA EASY FIX** system can be used for internal and external cladding with mechanical and traditional laying, with open and closed joint. Using four **OMEGA EASY FIX** elements, individually or in couplings, is possible to realize any kind of cladding, even with panels of different thicknesses at same time, maintaining the perfect co-planarity of the cladding itself. The **OMEGA EASY FIX** elements takes place in the cladding panels with their easy insertion into special slots, made, at the factory or at the job site, with our special equipment (*patent pending*)
