

ALAMO STONE

RIO LUCERNA COLLECTION

www.alamostone.com

The Rio Lucerna is a gneiss stone brought to you from Brazil. It features a beautiful pattern of light and dark grey bands that give you a textured look even when polished to a flat finish.

This versatile stone is available in split face, brushed, honed, cross cut honed, flamed and polished finishes, and can be used in most outdoor and indoor applications.

STONE HIGHLIGHTS

- Extremely dense, which make it ideal for high traffic areas like commercial driveways, public outdoor spaces, malls, and sidewalks.
- Thanks to its high resistance and anti-slip properties (certain finishes only), it can also be used in residential driveways and garages.
- Low water absorption, which makes it a great choice for countertops and other indoor applications.
